

Announcing a brand new way to reduce noise in your classrooms...

- Cut chair noise to barely audible!
- Simple to fit
- Instant results
- Hygienic and safe
- Reduces distractions, improves results
- Cost effective
- 25% discount for full classroom sets*
- A great companion to Soundfield systems

Hushh-ups® - the brilliant Canadian invention that has helped teachers all over America to reduce noise distraction, allowing more of what they say to be heard clearly. Any classroom with hard flooring and noisy chairs will benefit from this simple, effective & economic solution.

See over for full details of how to get this new way of controlling classroom noise into your school...

*a set is 120 Hushh-ups - enough for 30 x 4-legged chairs

NOISE -

the teacher's worst enemy!

PC Werth knows all about classroom noise. With our Soundfield systems, designed to lift a teacher's voice above the noise threshold and allow everyone to hear clearly, we've been helping schools to improve results across the country for over 15 years.

And now we're delighted to offer UK schools one of the best noise reduction products from America: **Hushh-ups®**

Designed to complement Soundfield systems, Hushh-ups® can also be used on their own to start reducing noise problems in uncarpeted classrooms for very low cost.

One Hushh-up, applied to every chair-leg, can bring down chair-related noise from over 85dB to just 40dB, making them barely audible. The result is easier teaching and less stress – a recipe for better results all round!

Frequent questions about Hushh-ups®:-

- 1. Are Hushh-ups safe?** Yes. Only the safest raw materials and manufacturing processes are used – all subject to rigorous testing. Most importantly they contain NO latex!
- 2. How long do Hushh-ups last?** At least three years – and often more than five. Their superior construction, high quality felt and thicker core means they outlast cheap tennis balls by many years.
- 3. Why can't I just use ordinary tennis balls and cut them myself?** Cutting them is dangerous in itself and is hard to do accurately, so that hand-cut balls usually drop off after a short period. Used tennis balls carry dirt, mould and bacteria into the classroom. Ordinary balls are inflated with gas or liquid chemicals which produce smells and toxic vapours. Ordinary balls also contain significant amounts of latex – a substance to which many children are allergic. Hushh-ups avoid all these problems by being accurately machine cut, inflated using plain compressed air and containing no odours, toxic substances or latex.
- 4. Can I still stack chairs fitted with Hushh-ups?** Absolutely! Hushh-ups help with moving the chairs and reduce damage to floors and tables. Hushh-ups also reduce the chance of eye injury when lifting chairs.
- 5. Will Hushh-ups fall off when chairs are moved.** No. Precision cutting ensures that they stay in position in normal use.
- 6. Can I clean them?** Yes – just use a damp cloth or lightly vacuum.
- 7. Won't my pupils remove the Hushh-ups and play with them?** Children are always interested in new things. Just take a few minutes before and after installation to explain why they now have Hushh-ups in their classroom, that they are now part of the furniture and should not be removed. Existing customers report that this approach works successfully within a normal classroom discipline regime.
- 8. Will Hushh-ups fit on different sized chairs and other furniture?** Yes. Cutting is made to allow for many different sizes of leg, including desks and tables if required.

Specifications:

- Specially manufactured from championship quality tennis balls
- Interior non-latex rubber core of 4mm
- Felt covering of wool and nylon, 5mm
- Precision cut opening
- Air inflated without using chemicals
- Free from formaldehyde, ammonium chloride, nitrates and nitrites.
- Warranty – 2 years from date of purchase in normal
