

Race Car Tympanometer

Play-like Impedance and Reflex Screening for Children

- Impedance measurement for children - game-like testing
- Colourful design gives the instrument a fun look
- Animated car race keeps the child's attention
- 1000 Hz High Frequency probe tone for small children
- Full automatic test sequence - a tympanogram takes a few seconds
- Stapedius reflex test with 4 test frequencies
- Also available with integrated audiometer

Race Car Tympanometer

Play-like Impedance and Reflex Screening for Children

General Technical Specifications

Car race keeps the child's attention

During the car race on the integrated LCD-screen, the test is performed automatically in the background. If the child does not move or is talking during the test, it wins the race. If it disturbs the test it has to continue "the race".

High Frequency Tympanometry

The high frequency probe tone of 1000 Hz is ideal for providing reliable results when testing newborns and young children.

Fast investigation of the middle ear

You can perform easily an impedance or stapedius reflex test with the Race Car Tympanometer. The whole test takes only 15 seconds. Four reflex frequencies are tested. The numeric test results are shown on the LCD-screen.

Easy operation

Just insert the lightweight probe with suitable eartip in the ear and the test starts automatically. The correct fitting in the ear can be verified by the two control lights on the probe. If required, the test result can be seen in real time on the LCD-screen. The test result of both ears is stored and can be printed out fast and virtually silent.

Customizable technology

With the built-in user menu, the RaceCar-Tympanometer can be easily adapted to individual requirements, i.e. you can change between the race car test for younger and normal impedance test for adults.

Versatile use with integrated Audiometer

The versatile Race Car Audiotype offers in addition an integrated air conduction audiometer with 8 test frequencies.

Standard accessories

Probe, ear tip set, calibration cavity with probe holder, mains cable, roll of paper

Optional accessories

TDH 39 contralateral phone with headband
Carrying case

Part No. 4682
Part.No. 705014

Technical data

Tympanometry mode:

Probe frequency, intensity 226 Hz \pm 1%, 85 dB SPL into 2 cm³,
1000 Hz
Pressure range + 200 to - 400 daPa
Volume range 0,1 to 6,0 ml
Accuracy \pm 5% or \pm 10 daPa
Test time < 3 seconds

Reflex Mode:

Test frequencies 500, 1000, 2000, 4000 Hz \pm 2%
Test method ipsilateral, contralateral (option)
Intensities ipsilateral 70 ... 105 dB HL
Intensities contralateral 70 ... 110 dB HL
Intensity setting automatic or manual

Test program Reflex test selectable
Memory Storage of test results for both ears
Menu For adapting to individual needs
(Pump speed, accuracy, reflex mode etc.)
Probe Lightweight adjustable hand-held probe with
built-in control light and switch

Audiometer (Option):

Test frequencies 0,125; 0,25; 0,5; 1; 2; 3; 4; 6; 8 kHz
Test level 0 to max. 90 dB SPL
Range adjustable in 5 dB steps
Headphone Telephonics TDH 39

General:

Standard IEC 601-1, IEC 645-5 class 2,
medical directive 93/42/EEC

Printer fast, virtually silent thermal printer
Print time 4 s / 12 s (Test results of both ears)
Display Graphic LCD-Display, contrast adjustable
PC interface USB
Power supply Mains 100 ... 240 V~, 50/60 Hz, 25 VA
Dimension and weight W x D x H: 39 x 29 x 11 cm / 2.6 kg
